RECOMMENDED WHEEL CARE INSTRUCTIONS

IT IS IMPERATIVE THAT YOU FOLLOW THE RECOMMENDED WHEEL CARE INSTRUCTIONS TO MAINTAIN THE FINISH OF YOUR PURE GRIT OFF-ROAD WHEELS AND PRODUCTS. IMPROPER MAINTENANCE, CLEANING AND NEGLECT MAY VOID ANY AND ALL WARRANTY CLAIMS.

PLEASE NOTE: It is highly recommended that your wheels be hand washed regularly to remove contaminants that may be present on your wheels such as brake dust, dirt, debris, snow, ice, road salt, snow melting chemicals, coastal/ocean sea salt mist and other contaminants that may be present on the roads which can cause pitting, corrosion and irreversible damage to the wheel's finish. This is especially important during winter months and the months after. It is important to remember that brake dust, dirt, debris, snow, ice, road salt, snow melting chemicals, coastal/ocean sea salt mist and other contaminants may still be present on the roads even after the winter months and may reactivate when they come in contact with water, such as when it rains. If you live near a body of water such as the ocean, the coastal/ocean sea salt mist can damage your wheels finish if not properly cared for. Do not drive into sand or bodies of water with salt and unknown substances and contaminants that can cause damage to the wheels finish.

Hand washing of your wheels is highly recommended. Touch-free, automatic, belt driven and other types of car washes and washing methods do not completely remove contaminants that may be present on the wheels and the cleaning agents used by these car washes can damage the wheels finish.

Never attempt to clean or wash your wheels when they are hot from driving, weather conditions or for any other reason. Attempting to clean your wheels when they are hot can result in damage to the wheels finish and may cause discoloration and other adverse effects. Attempting to cool your wheels by applying water or other substances or methods is not recommended.

To maintain the finish of your painted, chrome plated or PVD finished wheels, after first carefully hand washing them and removing all contaminants, it is recommended to apply a coat of a safe, non-abrasive (soft) wheel wax to the complete surface of your wheels to help seal and protect the finish against future contaminants.

Never attempt to use any high strength chemicals or abrasives to clean your wheels as these can cause permanent damage to the wheel finish.
